

Google Earth High Resolution Imagery Coverage (USA)

As of August 9, 2005

While Google Earth does cover the entire globe with satellite imagery at 15m resolution, we do not have high resolution imagery for the entire globe. We have focused on larger, US metropolitan areas initially and have expanded our coverage to major international cities. We will be adding much broader coverage in high-resolution detail over the coming months.

See the following charts for a comprehensive list of available high-resolution cities in the U.S. Subject to change without notice.
